#### Search Notes

Dear Examiner Johannsen,

Here are the results of your search.

Please feel free to contact me if you have any questions.

# STIC SEARCH RESULTS FEEDBACK FORM

#### Biotech-Chem Librard

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor 571-272-2507 Remsen E01 D86

Voluntary Results Feedback निर्माण
> I am an examiner in Workgroup: Example: 1610
> Relevant prior art found, search results used as follows:
☐ 102 rejection
☐ 103 rejection
Cited as being of interest.
☐ Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
Non-Patent Literature (journal articles, conference proceedings, new product announcements etc.)
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.
Comments:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, Swisspard; Tr., TREMBL; We, WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9337

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 6 contigs. The true order of the pieces

\* is not known and their order in this sequence record is

\* arbitrary. Gaps between the contigs are represented as

\* runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence

\* as soon as it is available and the accession number will

\* be preserved.

1 12827: contig of 12827 bp in length

It currently
* consists of 10 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
is believed to be correct as given, however the sizes
provided by the submittor.
* This sequence will be replaced
by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 30761 30860: gap of 100 bp
* 30861 31511: contig of 651 bp in length
* 31511 contig of 655 bp in length

AL Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Molecular and Human Genetics, Baylor College of Medicine, One On Nov 15, 2002 this sequence version replaced gi:22856702.

The sequence in this sequence version replaced gi:22856702.

and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas individual sequence contigs are ordered and oriented, and separated may extend beyond the ends of the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Harvey, Y., Havlak, P., Hawes, A., Henderson, N., Hernandez, J., Hernandez, R., Hines, S., Hladdin, S.L., Hodgson, A., Hogues, M., Jackson, A., Jackson, J., Jack

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Submitted (13.-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On May 13, 2003 this sequence version replaced gi:22857176.
The sequence in this seguence version replaced using Atlas and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold spandividual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Submitted (08-JUL-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA 3 (bases 1 to 226214)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Worley, K.C.

AL Submitted (23.NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

The sequence in this sequence version replaced gi:23321740.

and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.cmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig described individual sequence contigs are ordered and oriented, and separated contidual sequence contigs are ordered and oriented, and separated contigs within a contig-scaffold that consist entirely of whole shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gebregoorgis, B., Geer, K., Gill, R., Garcia, A., Garner, T., Gunaratene, P., Haaland, W., Hamil, C., Hamilton, C., Hamilton, K., Herrandez, P., Hawels, A., Henderson, N., Herrandez, J., Hollins, B., Howells, S., Hladun, S.L., Hodgson, A., Hogues, M., Jackson, L., Jacob, L., Jiang, H., Johnson, B., Johnson, B., Johnson, R., Kelly, S., Kelly, S., Kelly, S., Kann, Z., King, L., Liu, J., Liu, W., Liu, Y., London, P., Longacre, S., Lopez, J., Liu, J., Liu, W., Liu, Y., London, P., Longacre, S., Lopez, J., Liu, J., Maheshwari, M., Mahindartne, M., Mahmoud, M., Malloy, K., Martin, R., Martin, R., Martin, R., Martinez, B., Mayan, P., Martin, K., Martin, R., Martinez, B., Mallosavljevic, A., Miner, G., Minja, E., Monteany, J., Moore, S., Makelemeh, O., Okmonu, G., Olarmpunsagoon, A., Pal, S., Pauks, K., Pal, J., Newton, M., Olarmpunsagoon, A., Pal, S., Parks, K., Pluzzo, M., Olarmpunsagoon, A., Raise, C., Reilly, M., Reves, K., Regier, M., Savery, G., Scherer, S., Sooti, G., Shatsman, S., Sheth, H., Sheed, A., Sodergren, B., Song, Z., Sooti, G., Shatsman, S., Shen, H., Sheed, A., Sodergren, B., Song, Z., Sotter, G., Shatsman, S., Shen, H., Sheed, A., Sodergren, B., Song, Z., Sotter, C., Shatsman, S., Shen, H., Sheed, A., Sodergren, B., Song, Z., Sotter, C., Shatsman, S., Shen, H., Wang, G., Wang, G., Warren, A., Steek, A., Tabor, P., Taylor, C., Wang, G., Warren, A., Steek, A., Tabor, P., Taylor, C., Wang, G., Warren, A., Warren, R., Walker, B., Wang, J., Walter, B., Wang, J., Zhou, J., Yakub, S., Yen, J., Wang, J., Zhou, J., J., Yakub, S., Yen, J., Wang, J., Zhou, J., J., Shats, R., Wang, J., Walter, B., Wang, J., Wang, J., Walter, B., Wang, J., Walter, B., Wang, J., Walter, B., Wang, J., Wang, J., Zhou, Y., Zhou, S., Yen, J., Yoon, L., Robber, R., Smith, D.R., Holt, R.A., Smith, H.O.,

contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                          (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas as scaffold, within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence
table.

On Jul 2, 2003 this sequence requests: clonerequest@sanger.ac.uk Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence from the whole genome shotgun alone has only been used where it has phred quality of at least 30.
During sequence assembly data is compared from overlapping clones.

On May 16, 2002 this sequence version replaced gi:2039178.

Where difference assembly data is compared from overlapping clones. together with a note of the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with corresponding to the overlapping clone, as we submit sequences with regions were either double-stranded or sequence submission. This sequence was finished as follows unless otherwise noted: all chemistry or covered by high quality data (i.e., phred quality sequences and trepeats; all regions were covered by high quality data (i.e., phred quality sequences and repeats; all regions were covered by at least assembly was confirmed by restriction of men all subclone; and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Where differences are found these are annotated as variations variation anotation may not be found in the sequence submission corresponding to the overlapping clone name. Note that the corresponding to the overlapping clone, as we submit sequences with regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= as compressions and repeats; all regions were covered by high quality data (i.e., phred quality >= as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the occasion of the clone being a yAC.

The following abbreviations are used to associate primary accession on the wormer database can be found at high compression of the clone being a yAC.

THE SMBL; Sw; SWISSPROT; Tr: TREMBL; Wp:, WORMPEP database can be found at the reproper accust, Projects/C-elegans/wormpep RP23-359C20 is constructed by the group of Poieter de Jong.

Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 20, 2002 this sequence version replaced gi:22855866.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nwaokelemeh, O., Okwuonu, G., Olarnpunsagoon, A., Pal, S., Parks, K., Pasternak, S., Paul, H., Perez, A., Perez, L., Pfannkoch, C., Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pul, L.-L., Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pul, L.-L., Puzzo, M., Quiroz, J., Rachlin, E., Reeves, K., Regier, M. NOTE: Estimated insert size may differ from sequence length
(see http://www.bgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently
consists of 7 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.

RS Rat Genome Sequencing Consortium.

Direct Submission

AL Submitted (20-NOY-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 20, 2002 this sequence version replaced gi:23908157.

The sequence in this assembly is a combination of BAC based reads (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Morgan, M., Morris, K., Morris, S., Munidasa, M., Murphy, M., Nair, L., Nankervis, C., Neal, D., Newton, N., Nguyen, N., Norris, S., Nwaokelemeh, O., Okwonu, G., Olarmpunsagoon, A., Pal, S., Parks, K., Pasternak, S., Paul, H., Perez, A., Perez, L., Pfannkoch, C., Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pu, L.-L., Puzzo, M., Ouiroz, J., Rachlin, E., Reeves, K., Regier, M., Riggs, F., Reilly, M., Ren, Y., Reuter, M., Richards, S., Riggs, F., Reilly, B., Reilly, M., Ren, Y., Reuter, M., Rose, R., Ruis, S.J., Sanderes, W., Savery, G., Scherer, S., Scott, G., Shatsman, S., Shen, H., Shetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Valas, R., Vera, V., Villasana, D., Waldron, L., Walker, B., Wang, Q., Wang, S., Warren, J., Watren, R., Wei, X., White, F., Wang, G., Wilson, R., Wilson, R., Wei, X., White, F., Wanght, D., Waish, R., Wu, J., Yakub, S., Yen, J., Yoon, L., Yoon, V., Weinstock, G. and Gibbs, R.A. Consensus quality: 17900 bases at least Q30
Consensus quality: 17904 bases at least Q30
Consensus quality: 17946; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

\* NOTE: Estimated insert size may differ from sequence length

\* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 2 contigs. The true order of the pieces

\* is not known and their order in this sequence record is

\* arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.

\* This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun may have been used to confirm this sequence. Sequence day from the whole genome shotgun alone has only been used where it his a phred quality of at least 30.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.
the clone being a YAC.
RP23-173C3 is from the RPCI-23 Mouse BAC Library
constructed by the group of Pieter de Jong.

On Nov 19, 2002 this sequence version replaced gi:23265745.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hggc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represente a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (22-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 230227)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               snotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Direct Submission

AL Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
On Nov 20, 2002 this sequence version replaced gi:23265453.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the Clone and there may be sequence genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Milosavljevic, N., Miner, G., Minja, E., Montemayor, J., Moore, S., Morgan, M., Morris, K., Morris, S., Munidasa, M., Murphy, M., Nair, L., Nacyen, M., Morris, S., Parks, K., Nankervis, C., Neal, D., Newton, N., Nyuyen, N., Norris, S., Parks, K., Pasternak, S., Paul, H., Perez, A., Perez, L., Pfannkoch, C., Plopper, F., Poindexter, A., Popovic, D., Primus, E., Pu.L.-L., Plagper, F., Poindexter, A., Popovic, D., Primus, E., Pu.L.-L., Reilly, M., Ren, Y., Reuter, M., Reichards, S., Riggs, F., Reilly, M., Ren, Y., Reuter, M., Richards, S., Riggs, F., Rives, C., Rodkey, T., Rojas, A., Rose, M., Rose, R., Ruiz, S.J., Shetty, J., Shvartsbeyn, A., Sisson, I., Sitter, C.D., Smajs, D., Steimle, M., Strong, R., Sutton, A., Svatek, A., Tabor, P., Taylor, C., Valas, R., Vera, V., Villasana, D., Walter, B., Wang, G., Warren, J., Warren, R., Wei, X., White, F., Williann, G., Willson, R., Warren, R., Wei, X., White, F., Willson, R., Watzen, R., Wei, X., White, F., Willson, R., Willson, R., Warren, R., Wei, X., White, F., Willson, R., Walter, R., Wooden, H., Worley, K., Wiff, D., Rong, J., Zhou, J., Zhao, S., Dunn, D., von Weinstock, G. and Gibbs, R.A.

The sequence in this assembly is a combination of BAC based reads and whole genome shortgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shortgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (19-FEB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

                                                                                                                          밁
                                              Ş
                                                                                                                    The invention relates to genotyping an alpha-2B, 2A, or 2C adrenergic receptor gene (I)-(III) by detecting a polymorphic site, comprising; (a) controlled the site of these and for these and for the sequence includes a general complement of the sequence includes the comprising nucleotide positions 901-909 of (I), a site comprising complement of; and (b) detecting a polymorphic comprising nucleotide positions 901-909 of (I), a site comprising comprising comprising of (IIV) or a site comprising comprising comprising detecting a polymorphic comprising detecting a polymorphic site which correlate the comprising comprising detecting a polymorphic site which correlate to disease and further used to determine whether an individual is at increased comprising detecting a polymorphic site which correlate to disease and combinations of these. In addition, the technique may be used to predict combinations of these. In addition, the technique may be used to predict unitable and combinations of these, comprising and combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or alpha2C agonist (e.g. pracosin, ARC 239, raumolscine, idazoxam, tolazoline, plentolamine and combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or an alpha2B, alpha2A, or alpha2C combinations of these or alpha2C combinations of these or alpha2C combinations of the compression combinations
                                                                    Query Match

                                                                                                                                   The present sequence is a gene encoding human alpha2B-adrenoceptor (alpha2B-AR) protein. Alpha2B-AR has a glutamic acid repeat element (amino acids 298-309) of 12 glutamates, in an acidic stretch of 18 amino acids (amino acids 294-311), located in the third intracellular loop of the receptor polypeptide. Alpha2B-AR gene is located on chromosome 2. Alpha2-AR mediate many of the physiological effects of the catecholamines, norepinephrine and epinephrine. An antagonist of alpha2B-adrenoceptor is useful for treating a mammal suffering from vascular contraction of coronary arteries and a disease involving vascular contraction of coronary arteries which is clinically expressed as coronary hat disease (CDD), unstable chromic angina pectoris which is clinically expressed as Prinzmetal's variant form or acute myocardial infarction (AMI). Alpha2B-AR gene is used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Homo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; cardiant; gene therapy; alpha2B-adrenoceptor; alpha2B-AR; glutamic acid repeat; intracellular loop; chromosome 2; catecholamine norepinephrine; pennephrine; therapy; vascular contraction; coronary artery; coronary heat disease; CHD; chronic angina pectoris; acute myocardial infarction; AMI; Prinzmetal's variant; ds.

                                                                                                                                                                                                                                                                                    The invention relates to a method for detecting a risk of hypertension by determining the pattern of alleles encoding a variant alpha-2B-adrenoceptor (AR) protein. The methods and compositions of the invention are useful for detecting risks and targeting treatment for hypertension. The kit is also useful for selecting for clinical drug trials testing the antihypertensive effect of compounds. The present sequence is human alpha-2B-adrenoceptor gene

The invention relates to a combination which, comprises a number of polynucleotide probes comprising a sequence selected from one of the 1490 sequences mentioned in the specification. The combination is useful as an array element in a microarray for monitoring the expression of a number
                                                                                                                                                                           Combination of polynucleotide probes, useful as array elements microarray for monitoring the expression of a number of target polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                    (INCY-) INCYTE GENOMICS

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ACA56583 standard; cDNA; 2072
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A genomic DNA clone (AAT59499) codes for human alpha-2B adrenergic receptor (AAW1804), a member of the rhodopsin-like signal transducer family. It was isolated from a human spleen genomic library in the lambda vector Charon 28 by screening with a 16 be fragment of the human 5 encoding the alpha-2B adrenoceptor gene. Plasmid pNGC-alpha-2B comprising DNA have been adapted to allow prodm. of alpha-2B adrenoceptor in bacterial, yeast or mammalian cells; transfected Ltk- cells, designated L-NGC-alpha-2B, are deposited as ATCC CRL 10275. Membranes of such cells can used in bound to, the alpha-2B adrenoergic receptor. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 2064 BP; 319 A; 696 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Disclosure; Fig 2A-E; 16pp; English.

The microarray is also useful for monitoring progression of diseases and for developing sophisticated profiles for the effects of currently available therapeutic drugs. The combination is also useful for purifying a subpopulation of manas, cDNAs and genomic fragments and in research and diagnostic applications. The array can detect changes in expression in a large number of genes coding for different signaling pathway populations which can be used to diagnose various diseases including cancer e.g. adenocarcinoma and leukaemia, immunopathies e.g. AIDs and asthma, neuropathies e.g. Alzheimer's disease and Barkinson's disease. The present sequence represents a polynucleotide probe of the invention. Note: The sequence crepresents a polynucleotide form part of the printed specification but was obtained in electronic forms and directly from USPTO at
New isolated antigenic peptides e.g., for G protein-coupled receptors (GPCR), useful for diagnosing and designing drugs for treating conditions in which GPCRs are involved, e.g. AIDS, Alzheimer's disease, cancer or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        immunological-related cell proliferative disease; autoimmune disease; Alzheimer's disease; atherosclerosis; infection; osteoarthritis; allergy; osteoporosis; cardiomyopathy; inflammation; Crohn's disease; diabetes; graft versus host disease; Parkinson's disease; multiple sclerosis; pain; psoriasis; anxiety; depression; schizophrenia; dementia; memory loss; mental retardation; spliepsy; asthma; tuberculosis; obesity; nausea; hypertension; hypotension; renal disorder; rheumatoid arthritis; trauma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              G protein-coupled receptor; GPCR; antigenic peptide; gene therapy; G protein-coupled receptor modulator; antibody; immune-related disease; growth-related disease; cell regeneration-related disease; AIDS; cancer;
